Real Time Delphi Studies

This is a short “READ ME” manual that will show you some of the design choices that the sponsor of a study has available. If you want to use this software to run a study of your own, please contact:

Ted Gordon
tedjgordon@gmail.com
The people who you, as the Administrator, invite to participate in your study will see this page first. Note that the only sign in required is an email address of the participant which will never be furnished to a third party.
If they haven’t signed in before, this is the next page that participants will see. Participants must enter the study code to proceed. They will have been given this study code in the invitation they received from the Administrator. Anyone with this study code can participate. In more complex studies this page may ask for information about address, country, experience, age, gender, and other attributes which will be important to understanding the global results and will facilitate segmented statistical analysis.
Once they have signed in and clicked submit, they see

*Thanks Ted Gordon, you're now enrolled. Please [click here to proceed](#)*

And they proceed to the questionnaire itself.
The questionnaire then comes into view. This page shows the top portion of the questionnaire. The Administrator will have made several important choices in the design phase that affect this portion of the questionnaire.

Choose a logo
Write your own title and subtitle
Set the completion date
Write your own introduction and instructions
Other design choices of the Administrator will affect the body of the questionnaire. For example, the Administrator can choose the format of the response (e.g., multiple choice, text boxes, sliders, true/false, etc.). The Administrator can also select the number of columns, the number and wording of the questions, and much more.
Thanks for looking at some of the features of this system. You can see some examples of quizzes, polls, crowdsource, and Real Time Delphi studies elsewhere on this page. To discuss how you might use this software for your own studies, please email:
